

Verificación de PFC, PFMEA y CP / PFC, PFMEA AND CP Verification					
04 Specific verification					
DAC:	30	Verification date:	2026-03-02	Prepared by:	LUIS BURGOS
Revision:	37	Issue Tracking Number (if apply):	N/A	Reviewer:	LIZETH JIMENEZ

Is this specific verification a TDN?	Yes
--------------------------------------	-----

NOTE: In case of TDN, risk analysis is executed with F2741660 format. DAC is only recorded as a reference.

Score	
Green	Completely fulfilled
Red	Not Completely fulfilled / Not fulfilled
NA	Not applicable

Section		Description	Examples	Score	Remarks Mandatory for red results, other scores do not require a remark it can be left blank
Front page	Information for each revision	1. Revision	<i>Specific change</i>	NA	
		2. Change number	<i>Consecutive starting with zero</i>		
		3. Core Team	<i>Originator, PFMEA Coord. Approval, Launch Eng. Approval, Quality Approval, Process Eng. Approval, Area Manager Approval</i>		
		4. Date	<i>YYYYMMDD</i>		
		5. Change Description	<i>Describe the reason for the update (MCR, ICM, etc)</i>		
PFMEA & CP	Flow	<u>In case a new process has been added (enter NA if not applicable):</u> 1. The process function has ID number according to Standardized Process Matrix F2742012 & process flow chart and is it incorporated in the Flowchart, PFMEA and Control Plan?		Green	
	Potential failure mode	<u>In case a new failure mode has been added (enter NA if not applicable):</u> 1. Is it aligned with the requirement? 2. Does it have the complete structure (effects, causes, actions)? 3. Has the requirement been documented in the control plan? (the product or process characteristics). 4. In case of an internal claim, is the description of Potential failure according the 8D report description?		Green	
	Effects	<u>In case a new effect has been added (enter NA if not applicable):</u> 1. Have all potential customers been considered (Internal, External customer, End User, Legislative bodies)? 2. Have all potential effects been described in terms of what the customer might notice or experience? 3. Are Severity rankings using AIAG,VDA or GCSR criteria? 4. Was it evaluated if it was necessary to update the list of special features? 5. Are all Special characteristics review and verified between FMEA & CP?		Green	
	Potential causes	<u>If a new cause has been added (enter NA if not applicable):</u> 1. Are causes described in terms of a characteristic that can be fixed or controlled? Typical failure causes may include the classic Ishikawa's 4M, but are not limited to: Man, Machine/Equipment, Material (indirect), Environment (consider GCSR). 2. In case of an internal claim, is the description of Potential cause according the 8D report description?		Green	
	Occurrence re-ranking.	In case of an internal claim (enter NA if not applicable): 1. Have internal nonconformities been considered to estimate the Occurrence rating? Evidence of QRQC & Scrap indicators are required, past 6 months minimum. Note: After the Occurrence rating is established, any Characteristic that affects a failure mode with a severity of 5 or higher and an occurrence of 4 or higher must be reviewed to determine if they should become a Significant Characteristic (according to PLM310-W-008).		NA	
	Current Controls	If a new control has been added (enter NA if not applicable): 1. Are new preventive actions defined for eliminate (prevent) the failure cause or reduce its rate of occurrence? 2. Are new detection actions defined for detect the existence of a failure cause or the failure mode? 3. Was it documented in the control plan? 4. If necessary, was it documented in Visual Job Instructions, First Part Release Checklist or any other manufacturing document? 5. Detection ranking consistent with AIAG,VDA or GCSR criteria? 6. In case of an internal claim, is the description of controls according the 8D report description?		Green	
	Recommended actions	<u>In case a new or updated recommended action has been added (enter NA if not applicable):</u> 1. Are recommended actions considered to reduce Severity, Occurrence and/or Detection ratings? 2. Is it defined Responsible (specific person not a department) and timing for all Recommended Actions listed? 3. Have the open recommended actions been registered in Issue Tracking? 4. Was the PFMEA updated after the Recommended Actions were implemented (without overdue dates)?		NA	
	Action Results	<u>In case a new or updated action taken has been added (enter NA if not applicable):</u> 1. "Actions Taken" column filled out with a clear description of what was done? 2. Re-rankings affected Severity, Occurrence and/or Detection? 3. Severity, Occurrence and/or Detection re-rankings are consistent with AIAG,VDA or GCSR criteria?		NA	
Optimization	Action priority List	<u>ALWAYS check if the change has any impact in the Action priority List F4023582 (enter NA if no impact):</u> 1. Does the information included in the Action priority List F4023582 match with the PFMEA? 2. Do the actions with "No further action is needed" or "rejected" have the justification in the Action priority List F4023582? 3. Have the open recommended actions been registered in Issue Tracking? 4. Is the list signed by the managers?		NA	
Documentation	Sharepoint	The edits for this revision have been placed in sharepoint (Front page, process flow chart, PFMEA, CP, APIS, list of special features)?		NA	
Controls	Floor Validaton	Were the process and controls evaluated and updated? NOTE: should be done in production floor. (enter NA if not applicable)		NA
